

WHAT'S ON THE NEW CAR ENVIRONMENTAL LABEL?

RUNNING COSTS

Instantly see what your monthly fuel and annual VED costs could be for this car, making it easy to compare different models. Low and zero-emission cars cost less.

For pure electric and plug-in hybrids this total includes the cost of the electricity to charge the car at home.

ELECTRIC RANGE

For a pure electric or plug-in hybrid car, this tells you how far it may be able to drive on electricity only. If you're a company car driver, this also now might affect the benefit in kind tax you pay.

TAILPIPE EMISSIONS

The precise CO₂ emissions for this car. The lower the figure, the less first-year VED and company car tax you pay. You'll also see if this car qualifies as an 'Ultra Low Emission Vehicle', the exact Euro Standard and that it can drive freely in Clean Air Zones and London's ULEZ.

FUEL ECONOMY

This car's official 'miles per gallon' figures for different types of driving, from city to motorway. You can use these to choose the most economical car for the journeys you usually do.

ELECTRICITY CONSUMPTION

How many miles a pure electric or plug-in hybrid car can travel on one kWh of electricity. The higher the figure, the more efficient the car is.

Fuel economy, emissions and running costs

Plug-in hybrid 

Running costs

Estimated monthly fuel cost  **£27** Estimated monthly electricity cost  **£29** Total monthly energy cost* **£56**

VED (road tax) for 12 months

Year 1 rate is linked to CO₂ emissions (the lower your vehicle's emissions the less you have to pay), fuel type and emission standard (diesels only). Cars with a list price over £40,000 when new pay an extra £325 per year from years 2 to 6, which is not included here.

Year 1 **£0** Year 2 onwards **£140**

Equivalent all-electric range

This tells you roughly how far you might be able to drive on a full electric charge before the petrol or diesel engine cuts in, averaged across various journey types (city to motorway). Whilst achievable in ideal conditions, 'real world' day-to-day journeys are never the same and affected by many external factors, meaning your individual electric range may well be different.

 **30 miles**

Tailpipe Emissions

CO₂ is the main greenhouse gas responsible for climate change

Emission standards

ULEV ✓ **6** ✓

Ultra Low Emission Vehicle **ULEV** Euro Standard: Euro 6d-TEMP

ULEZ ✓

Clean Air Zones (England and Wales) **CAZ** Ultra Low Emission Zone (London) **ULEZ**

This vehicle meets the emissions standard for private cars set by government under the Clean Air Zone (CAZ) framework for England and Wales currently in place until 2025. Stricter CAZ standards and restrictions could then apply. Some local authorities may also impose more stringent emissions limits and controls in certain areas, which this vehicle may not meet. A ULEV meets the current government standard for an Ultra Low Emission Vehicle, stricter standards could apply in the future.

Fuel economy

Environmental information: A guide on fuel economy and CO₂ emissions which contains data for all new passenger car models is available at any point of sale free of charge. In addition to the fuel efficiency of a car, driving behaviour as well as other non-technical factors play a role in determining a car's fuel consumption and CO₂ emissions. CO₂ is the main greenhouse gas responsible for climate change.

| | | | |
|--------------------|--|------------------------------|-------|
| Make/model: | | Engine capacity (cc): | 1969 |
| Fuel type: | Electricity / Petrol   | Transmission: | 8AAWD |

Fuel consumption:

| Drive cycle | Litres/100km | Mpg |
|-----------------------------|--------------|-------|
| Low (city) | 6.6 | 43.0 |
| Medium (town) | 7.6 | 36.9 |
| High (rural) | 6.1 | 46.3 |
| Extra High (motorway) | 7.8 | 36.0 |
| Combined average (weighted) | 1.7 | 169.4 |

Electricity consumption (weighted): 3.5 miles/kWh

Carbon dioxide emissions (weighted): 42 g/km

All fuel economy, electricity consumption, electric range and emissions figures are from the WLTP laboratory test and specific to this car. These provide a realistic and reliable indication of what's achievable in ideal conditions. However, as no test can fully reflect real-world driving conditions and behaviour, there will always be some differences.
* Estimated monthly fuel costs is based on an average of 10,000 miles per year and assume the vehicle is regularly plugged in and operating using both electricity and fuel. Calculation uses the WLTP weighted combined fuel and electricity consumption figures and fuel costs of: petrol £1.20/litre; diesel £1.24/litre; electricity 12.5 p/kWh (at April 2020).

WHAT IS THE NEW CAR ENVIRONMENTAL LABEL?

Every new car on show at a dealership or event displays its own 'Environmental Label', which includes the all-important official facts about that specific car you need to reliably compare different models and make a better-informed choice.

This information comes from a new and improved independent testing process that's more robust and realistic, approved by both Government and the vehicle manufacturers.

THERE IS A DIFFERENT LABEL FOR EACH CAR FUEL-TYPE:

PURE ELECTRIC CAR LABEL

Fuel economy, emissions and running costs

Model A

Running costs

Total monthly electricity cost* **£28** **VED (road tax) for 12 months** **£0** **VED (road tax) for 13 months** **£0**

Electric range **191 miles**

Tailpipe Emissions

CO₂ 0g/km

Energy consumption **12.2 kWh/100 miles**

Carbon dioxide emissions **0g/km**

Environmental information: A guide to fuel economy and CO₂ emissions which contains data for all new passenger car models is available at any point of sale free of charge. In addition to the fuel efficiency of a car, other factors such as engine type, transmission, engine capacity, engine speed, gear ratio, and vehicle weight can also affect fuel economy and CO₂ emissions. CO₂ is a trace gas responsible for climate change. Fuel economy and CO₂ emissions are subject to independent testing by the Government.

Fuel type: Electric Engine capacity (litre): N/A Transmission: N/A

| Drive cycle | Litres/100km | Mpg |
|--------------------------|--------------|-----|
| Low cycle | N/A | N/A |
| Medium (best) | N/A | N/A |
| High (worst) | N/A | N/A |
| Extra high (provisional) | N/A | N/A |

Fuel consumption: 12.2 kWh/100 miles
 Carbon dioxide emissions: 0g/km

PLUG-IN HYBRID CAR LABEL

Fuel economy, emissions and running costs

Model B

Running costs

Total monthly electricity cost* **£27** **VED (road tax) for 12 months** **£0** **VED (road tax) for 13 months** **£0**

Equivalent all-electric range **30 miles**

Tailpipe Emissions

CO₂ 10g/km

Energy consumption **12.2 kWh/100 miles**

Carbon dioxide emissions **10g/km**

Environmental information: A guide to fuel economy and CO₂ emissions which contains data for all new passenger car models is available at any point of sale free of charge. In addition to the fuel efficiency of a car, other factors such as engine type, transmission, engine capacity, engine speed, gear ratio, and vehicle weight can also affect fuel economy and CO₂ emissions. CO₂ is a trace gas responsible for climate change. Fuel economy and CO₂ emissions are subject to independent testing by the Government.

Fuel type: Electric Engine capacity (litre): 1.8 Transmission: Auto

| Drive cycle | Litres/100km | Mpg |
|--------------------------|--------------|------|
| Low cycle | 7.7 | 37.8 |
| Medium (best) | 7.4 | 39.0 |
| High (worst) | 8.1 | 36.0 |
| Extra high (provisional) | 7.8 | 37.0 |

Fuel consumption: 12.2 kWh/100 miles
 Carbon dioxide emissions: 10g/km

Find out more about all the low emission vehicles at GoItThatWay.com

PETROL AND DIESEL CAR LABEL

Fuel economy, emissions and running costs

Model C

Running costs

Total monthly fuel cost* **£96** **VED (road tax) for 12 months** **£175** **VED (road tax) for 13 months** **£160**

Equivalent all-electric range **30 miles**

Tailpipe Emissions

CO₂ 134g/km

Energy consumption **12.2 kWh/100 miles**

Carbon dioxide emissions **134g/km**

Environmental information: A guide to fuel economy and CO₂ emissions which contains data for all new passenger car models is available at any point of sale free of charge. In addition to the fuel efficiency of a car, other factors such as engine type, transmission, engine capacity, engine speed, gear ratio, and vehicle weight can also affect fuel economy and CO₂ emissions. CO₂ is a trace gas responsible for climate change. Fuel economy and CO₂ emissions are subject to independent testing by the Government.

Fuel type: Petrol Engine capacity (litre): 1.8 Transmission: Manual 5-speed

| Drive cycle | Litres/100km | Mpg |
|--------------------------|--------------|------|
| Low cycle | 8.8 | 33.1 |
| Medium (best) | 8.4 | 34.0 |
| High (worst) | 9.1 | 31.4 |
| Extra high (provisional) | 8.5 | 33.5 |

Fuel consumption: 12.2 kWh/100 miles
 Carbon dioxide emissions: 134g/km
